Taylor Aucoin

PRODUCT ENGINEER

hello@tayloraucoin.com · Vancouver, BC (remote) · tayloraucoin.com · linkedin.com/in/taylor-aucoin · github.com/tayloraucoin

Product engineer and technical founder, taking products from zero to one across healthtech, AI platforms, commerce and booking. Shapes the problem, ships it and sets it up to be measured, then owns it from the database to the last pixel. AI writes first drafts under written conventions. The data model, money paths and auth get checked by hand.

Since 2016 building software · **13 products** zero to one · **22 cohorts** taught

Experience

Future of Cities
Platform · CRM — 2026

Fractional CTO, contract

- Unified ten legacy databases across five business entities into one monorepo, one database and one login.
- Shipped five production apps in six weeks on 200+ Prisma models, with row-level security on 150+ tables.
- Built the CRM in four days when scope grew, and delivered booking and subscription payments to a fixed event deadline.
- Wrote the conventions and SOPs that let the team keep extending the platform through Claude Code without engineering staff.

Next.js · TypeScript · Turborepo · Prisma · Supabase · PostgreSQL · Stripe

Conscious Connections
AI mediation · Safety systems — 2026 – present

Founder, engineer, designer

- Built a coaching tool for couples as a solo founder, with an AI coach that translates each partner's side of a conflict. In beta ahead of launch.
- Designed a compress-then-reason pipeline (Haiku distills, Sonnet coaches) and a parallel classifier for intimate-partner-violence signals.
- Enforced privacy with deny-by-default row-level security on every table and a context loader per AI touchpoint.
- Runs the build with thirty-plus role-prompted AI agents held to specs and append-only decision logs. Every migration is read by hand, ninety-one so far.

Next.js · TypeScript · tRPC · Drizzle · Supabase · Claude API · Stripe

Everbook
Realtime voice AI · Print engine — 2024 – 2025

Senior software engineer (founding engineer), at Pine Studio

- Took an AI voice interview that becomes a press-ready hardcover from greenfield to production in six months, then a relaunch.
- Wired the browser straight to OpenAI's Realtime API over WebRTC, so the server never touches the audio.
- Built a pagination engine that measures typeset content against true print dimensions, down to the word.
- Held over 99% production stability, and wrote the conventions, API standards and review process as engineers joined.

Next.js · TypeScript · Prisma · PostgreSQL · OpenAI Realtime · Stripe · Puppeteer

Agora
Recommender · Enrichment · Search — 2021 – 2026

Technical founder (CEO, CTO)

- Built three versions over five years, each a fresh codebase. Wrote ~95% of v1 while directing a team of up to twelve.
- Built LLM enrichment of an untrusted catalog into a 674-tag taxonomy, feeding a Keras recommender retrained hourly.
- Directed BCIT cohorts, an SFU co-op and an intern. Backlogged the product in March 2026, when the numbers didn't work.

Next.js · TypeScript · PostgreSQL · pgvector · Elasticsearch · TensorFlow/Keras · OpenAI

Skills

Product engineering	TypeScript, React, Next.js, Node.js, tRPC, TanStack Query, Zustand, Zod, Tailwind CSS, shadcn/ui
Data and backend	PostgreSQL, Supabase, Drizzle ORM, Prisma/Drizzle schema design, Sanity, Stripe, Resend, Vercel, Turborepo
AI engineering	Claude API, OpenAI API, OpenAI Realtime API, Cursor, Claude Code, multi-agent workflows, AI-assisted development governance
Design and leadership	Interface design, engineering conventions and schema standards, code review, Linear, leading junior teams

Taylor Aucoin Product engineer · hello@tayloraucoin.com

Earlier experience

Roomvy Booking flow · Client app 2023

Senior frontend engineer, at Pathfinder Studios

- Built the entire participant-facing booking client solo, on the agency's stack and conventions: map discovery, multi-room checkout and card holds.
- Shipped with zero issues reported in production, with self-managed QA as the only release gate.

Next.js · TypeScript · React · Tailwind CSS · Apollo GraphQL · Valtio

Pathfinder Studios Tech pilot and business development 2023

Calculate by QxMD Healthtech · Clinical tools 2019 – 2021

Frontend software engineer, a WebMD/Medscape company

- Rebuilt the clinical calculators physicians use at the point of care in Next.js, shipped first inside Medscape and then on qxmd.com, with zero bugs reported from launch to the end of tenure.
- Replaced Medscape's expiring third-party calculator licensing with a product the company owned.

React · Next.js · TypeScript · Redux · styled-components · Cypress

The Chart Guys (Crypto Alerts) Software developer, UX designer 2017 – 2018

FYBR Inc. (GIS Drone Imagery Reporting Suite) Software developer, first development job 2016 – 2017

Teaching & sponsoring programmes

Programmes sponsored through Agora to put student teams on real projects, then taught so they'd ship. Each term: scoping, ERD and wireframe reviews, sprint planning, code review, and the tickets that make junior delivery possible. At peak, four teams at once.

BCIT ISSP Industry Sponsored Student Projects, senior developer and project lead	14 cohorts
Venture for Canada intrapreneurship programme	4 cohorts
FLUI Design Hackathon Emily Carr University of Art + Design, sponsoring client	2 cohorts
SFU co-op and virtual intern co-op student, virtual intern	2 cohorts

Selected design and websites

Coded portfolio site and brand kit for filmmaker Kryshan Randel, live at kryshanrandel.com. Brand kits for Agora, Conscious Connections and tayloraucoin.com.

Education

Lighthouse Labs Web Development bootcamp	2016
BrainStation UX Design	2017
RED Academy Digital Marketing Foundations	2019
League of Innovators (LOI) Founder, through Agora (Batch 11 LOI Labs)	2023
UBCO Kinesiology	2012 – 2013
UNBC Biomedical	2010 – 2012

"Taylor is a phenomenal engineer. During his time at Pine Studio, he took rough concepts and turned them into full products."

Dawson Whitfield, Co-founder of Looka · Founder, Everbook
